PT Calcium reverse.

PT antibody production

PS Example 25; Fig 47; 174pp; English.

CC The bovine parathyroid calcium receptor gene encodes a 1085 amino acid

CC protein. The tissue from which this receptor and receptors from human

CC protein. The tissue from which this receptor and receptors from human

CC protein. The tissue from which this receptor and receptors from human

CC protein. The tissue from which this receptor changes, and control

CC changes, in calcium ion concentration, e.g. parathyroid hormone regulates

CC C2+ homeostasis in blood and extracellular fluid, and kidney function

CC alters through changes in C2+ levels in juxtaglomerular and proximal

CC tubule cells in the kidney. The purified receptors (produced

CC receptor activity, can be used to screen for compounds that modulate calcium

CC receptor activity, especially those that can be used to treat diseases

CC associated with the receptors in these tissues. They can also be used

CC to raise antibodies for use in detection assays.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             recombinant cell comparises a recombinant nucleic acid expressing the CR, CR provided that the cell does not have functional CR expression from CR endogenous nucleic acid; (B) determining the ability of the test CR compound to affect one or more activities of the calcium receptor; and CR (C) comparing the ability with the ability of the test compound to affect the one or more CR activities in a cell not comprising the CR careful acid. The present sequence encodes bowine CR parathyroid CR, designated a BopCaR 1. The nucleic acid in the CR parathyroid CR, designated a BopCaR 1. The nucleic acid in the CR parathyroid CR, designated a BopCaR 1. The nucleic acid in the CR parathyroid CR, designated a BopCaR 1. The nucleic acid in the CR parathyroid can be used to treat the compounds identified can be used to treat diseases or disorders characterised by abnormal calcium homeostasis, e.g. hyperparathyroidism, osteoporosis and other bone and mineral-related CR disorders associated with disrupted CR2+ responses, e.g. seizures, creative, spinal cord injury, hypoxia-induced nerve cell damage such as in Craftiac arrest or neonatal distress, epilepsy, neurodegenerative Ciseases such as Alzheimer's disease, Huntington's disease and CR parkinson's disease, dementia, muscle tersion, depression, and anxiety.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

Calcium receptor; human parathyroid gland adenoma tumour; pBoPCaR1; primary hyperparathyroidism; Kenopus oocyte; alternative splicing; calcium-activated chloride current; agonist; NPS R-467; NPS R-568; variant; untranslated region; alternative polyadenylation; probe; alternative transcription initiation; pHupCaR5.2; pHupCaR4.0;
These sequences given in T61381-82 encode numerical gland adenoma
These sequences were isolated from human parathyroid gland adenoma
These sequences were isolated from human parathyroid gland adenoma
tumour using pBopCaR1 as a hybridisation probe. mRNA was isolated from
all year old caucasian male diagnosed with primary hyperparathyroidism

                                                                                                                                                                                                                          New disarylalkyl amine cpds, useful for modulating inorganic ion receptor activities - esp. for modulating effect of extracellular calcium on cell surface calcium receptors, useful for treating e.g. hyperparathyroidism, Paget's disease or osteoporosis Example 1; Page 93-100; 231pp; English.

The sequences given in T61381-82 encode functional calcium receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         3095

CC functional calcium receptors.

CC calcium receptors as assessed by the stimulation of calcium-activated CC chloride currents upon addition of appropriate calcium receptor agonists, CC e.g. NPS R-467 and NPS R-558. Sequence analysis of the two cDNA clones indicated the existence of at least two sequence variants differing in CC the 3' untranslated region and which may result from alternative CC polyadenylation. Sequence variation also exists in the 5' end of the CC inserts. These sequence differences may have arisen due to alternative transcription initiation and/or splicing. These additional sites of sequence variation occur within the coding regions of cDNA clones CC phuPCaR5.2 and phuPCaR4.0 demonstrating that they encode distinct proteins. Sequence analysis of the human CaR gene indicates that the coding regions of cDNA clones of cDNA clones of cDNA clones of cDNA clones. Sequence analysis of the human CaR gene indicates that the proteins. Sequence analysis of the human CaR gene indicates that the coding regions of cDNA clones of cDNA clones. Sequence analysis of the human CaR gene indicates that the proteins. Sequence analysis of the human CaR gene encoded by compared to phuPCaR4.0, results from alternative mRNA splicing. This alternative splicing is predicted to insert 10 additional amino acids into the CaR protein encoded by phuPCaR5.2 between residues 536 and 537 of the protein encoded by chuPCaR5.2 between residues 536 and 537 of the protein encoded by chuPCaR5.0. In addition phuPCaR4.0 encodes Gln at position 925 and Gly at positions. The human CaR gene encodes for Gln and Arg respectively at these two receptor isoforms may be functionally and/or
                                                                                                                                                       Query Match

                                                                                                                                                                   DNA encoding calcium receptor polypeptide(s) - useful for therapeutic purposes, e.g. hyperparathyroidism and osteoporosis Claim 15: Columns 125-134: 174pp; English.

The present sequence encodes human parathyroid cell calcium receptor 4.0 (HuPCaR 4.0).

The specification includes details of molecules that can modulate one or more inorganic ion receptor activities, and antibodies and antibody fragments targetted to inorganic ion receptor proteins. The specification includes and antibodies may be used to treat includes that the sequence of the sequence o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              T95859;

The tissue from which the receptor and receptors from bovine parathyroid and rat kidney are derived, respond to changes, and control changes, in calcium ion concentration, e.g. parathyroid hormone regulates ca2+ homeostasis in blood and extracellular fluid, and kidney function alters through changes in Ca2+ levels in juxtaglomerular and proximal tubule cells in the kidney. The purified receptors (produced recombinantly) can be used to screen for compounds that modulate calcium receptor activity, especially those that can be used to treat diseases associated with the receptors in these tissues. They can also be used to raise antibodies for use in detection assays. sequence 3809 BP; 910 A; 1071 C; 979 G; 849 T;

The present sequence encodes human parathyroid CR, designated a pHuPCaR 4.0. The nucleic acid sequence of pHuPCaR 4.0 can be used as part of the recombinant nucleic acid in the method described above. The compounds identified can be used to treat diseases or disorders characterised by abnormal calcium homeostasis, e.g. hyperparathyroidism, osteoporosis and other bone and mineral-related disorders. They can also be used for the treatment of diseases and disorders associated with disrupted Ca2+ responses, e.g. seizures, stroke, spinal cord injury, hypoxia-induced nerve cell damage such as in cardiac arrest or neonatal distress, epilepsy, neurodegenerative diseases such as Alzheimer's disease, tension, depression, and anxiety. CC injected into Xenopus oocytes which were assayed for the presence of the functional calcium receptors. Both clone types gave rise to functional calcium receptors as assessed by the stimulation of calcium-activated calcium receptors as assessed by the stimulation of calcium-activated calcium receptors as assessed by the stimulation of calcium-activated calcium receptor agonists, compared to the currents upon addition of appropriate calcium receptor agonists, compared to the existence of at least two sequence variants differing in the 3' untranslated region and which may result from alternative the golyadenylation. Sequence variation also exists in the 5' end of the compared compared part of the compared to alternative transcription initiation and/or splicing. Three additional sites of sequence variation occur within the coding regions of cDNA clones of sequence variation occur within the coding regions of cDNA clones of the proteins. Sequence analysis of the human CaR gene indicates that the proteins. Sequence analysis of the human CaR gene indicates that the additional anino acids into the CaR protein encoded by phuPCaR5.2 between residues 536 and 537 of the protein encoded by phuPCaR5.2 between residues 536 and 537 of the protein encoded by consistion 90, whereas phuPCaR4.0 encodes Gln and position 925 and Gly contained to the care protein encoded by the positions. The human CaR gene encodes for Gln and Arg respectively at these positions. These two receptor isoforms may be functionally and/or characterically distinct.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          These sequences were isolated from human parathyroid gland adenoma tumour using pBoPCaR1 as a hybridisation probe. mRNA was isolated from a 39 year old caucasian male diagnosed with primary hyperparathyroidism and two clones of approx. 5 and 4 kb were identified. These cDNA's were
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New di:arylalkyl amine cpds. useful for modulating inorganic ion receptor activities - esp. for modulating effect of extracellular calcium on cell surface calcium receptors, useful for treating e. hyperparathyroidism, Paget's disease or osteoporosis Example 1; Page 85-93; 231pp; English.

The sequences given in T61381-82 encode functional calcium receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            these positions. pharmacologically
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Balandrin

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Q
                                                                                                                                     This sequence encodes a chimeric receptor. The chimeric receptor comprises an extracellular domain, a seven transmembrane domain, and an intracellular cytoplasmic tail domain, and a sequence of at least 6 contiguous amino acids is homologous to a sequence of a metabotropic glutamate receptor (MGR), and a sequence of at least 6 contiguous amino acids is homologous to a sequence of at least 6 contiguous amino acids is homologous to a sequence of a calcium receptor (CR). The chimeric receptor may be used for screening for compounds that bind to or modulate the activity of MGR or CR and for determining the site-of-action of a CR active compound. The compounds can be used in the treatment of neurological diseases and disorders. They can also be
                                                                                                                                                                                                                                                                                                                                                          conpounds

Example 3; Fig 3; 177pp; English.

The chimeric receptor. The chimeric receptor and a sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Chimeric receptor; extracellular domain; seven transmembrane domain; intracellular cytoplasmic tail domain; metabotropic glutamate recept MGR; calcium receptor; CR; mGluR; G protein-coupled receptor; neurological disease; ss.

Chimeric - Homo sapiens.
                                                      used as diagnostic agents. Chimeric receptors such as this, allow the coupling of certain functional aspects of an MGR with certain functional aspects of a CR. They allow for more efficient high-throughput screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Chimeric receptors comprising calcium receptor - used for s

DNA encoding calcium receptor polypeptide(s) - useful for therapeutic purposes, e.g. hyperparathyroidism and osteoporosis (laim 15; Columns 117-126; 174pp; English.

C Talim 15; Columns 117-126; 174pp; English.

C The present sequence encodes human parathyroid cell calcium receptor 5.2 (HuPCaR 5.2).

C The specification includes details of molecules that can modulate one or more inorganic ion receptor activities, and antibodies and antibody fragments targetted to inorganic ion receptor proteins. The proteins, nucleic acids and antibodies may be used to treat disorders by modulating one or more inorganic ion receptor activities, preferably disorders of calcium homeostasis, e.g. hyperparathyroidism and osteoporosis.

                                                                                               The Human parathyroid calcium receptor gene encodes a 1088 amino acid protein. The tissue from which this receptor and receptors from bowine parathyroid and rat kidney are derived, respond to changes, and control changes, in calcium ion concentration, e.g. parathyroid hormone regulates ca2+ homeostasis in blood and extracellular fluid, and kidney function alters through changes in Ca2+ levels in jux taglomerular and proximal tubule cells in the kidney. The purified receptors (produced recombinantly) can be used to screen for compounds that modulate calcium receptor activity, especially those that can be used to treat diseases associated with the receptors in these tissues. They can also be used to raise antibodies for use in detection assays.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        provided that the cell does not have functional CR expression from endogenous nucleic acid; (B) determining the ability of the test compound to affect one or more activities of the calcium receptor; and (C) comparing the ability with the ability of the test compound to affect the one or more CR activities in a cell not comprising the recombinant nucleic acid. The present sequence encodes human parathyroid CR, designated a pHuPCAR 5.2 The nucleic acid sequence of pHuPCAR 5.2 can be used as part of the recombinant nucleic acid in the method described above. The compounds identified can be used to treat diseases or disorders characterised by abnormal calcium homeostasis, e hyperparathyroidism, osteoporosis and other bone and mineral-related disorders. They can also be used for the treatment of diseases and disorders associated with discribers the treatment of diseases and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               p-PSDB; W89564.

Screening for calcium receptor-active compounds - by recombinant expression of nucleic acid encoding calcium receptor and determin the effect of compounds on calcium receptor activity Claim 1; Fig 48; 176pp; English.

A method has been developed of screening for a compound able to a one or more activities of a calcium receptor (CR) comprises: (A) contacting a recombinant cell with a test compound, where the recombinant cell comprises a recombinant nucleic acid expressing
                                                                                                                                                                                                                                                                                                                                                                                                                                                   disorders associated with disrupted Ca2+ responses, e.g. seizures, stroke, spinal cord injury, hypoxia-induced nerve cell damage such cardiac arrest or neonatal distress, pellepsy, neurodegenerative diseases such as Alzheimer's disease, Huntington's disease and Parkinson's disease, dementia, muscle tension, depression, and anxi Sequence 5006 Bp; 1228 A; 1376 C; 1220 G; 1182 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Balandrin MF, Brown EM, Del Mar EG, Hebert SC, Nemeth EF, Van Wagenen E WPI; 99-119871/10.

Key
sequence; an isolated PVCR present in the plasma membranes of aquatic species, especially on the apical membrane of epithelial cells of elasmobranch fish, particularly from cells found in the collecting duct or late distal tubule in the kidney, intestine, gill, rectal gland, gonad or brain; an antibody that specifically binds to a PVCR; and a method of screening for aquatic PVCR agonists and antagonists. Modulation of the expression of the
                                                                                                                                                                                                          This cDNA clone codes for dogfish shark kidney calcium receptor related protein (SKCaR-RP, see W3205), an aquatic polyvalent cation-sensing receptor (PVCR). It was isolated from a shark kidney cDNA library using a rat kidney calcium receptor cDNA as probe. Also claimed are: a probe comprising the 4131 bp SKCaR-RP
                                                                                                                                                                                                                                                                                                                                                            New isolated Aquatic polyvalent of develop products for increasing of fish for use in aquaculture Claim 2: Fig 4A-F: 57pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Dogfish shark kidney calcium receptor related protein cDNA. The method facilitates the aquaculture of marine fish and can provide for the development of marine fish that are easily adaptable to fresh water aquaculture.

                                                                                                                                                                              The specification includes details of molecules that can modulate one or more inorganic ion receptor activities, and antibodies and antibody fragments targetted to inorganic ion receptor proteins. In proteins and antibodies may be used to treat disorders by modulating one or more inorganic ion receptor activities, preferably disorders of calcium homeostasis, e.g. hyperparathyroidism and osteoporosis.

PT Gaicium receptor:

PT antibody production

PS Example 30; Fig 50; 174pp; English.

CC The rat kidney calcium receptor gene encodes a 1079 amino acid protein.

CC The tissue from which this receptor and receptors from bovine parathyroid

CC and rat kidney are derived, respond to changes, and control changes, in

CC calcium ion concentration, e.g. parathyroid hormone regulates Ca2+

CC homeostasis in blood and extracellular fluid, and kidney function alters

CC through changes in Ca2+ levels in juxtaglomerular and proximal tubule

CC cells in the kidney. The purified receptors (produced

CC recombinantly) can be used to screen for compounds that modulate calcium

CC receptor activity, especially those that can be used to treat diseases

CC associated with the receptors in these tissues. They can also be used

CC to raise antibodies for use in detection assays.
